Quality of Life

role in the body's overall balance: stress levels, diet, sleep, and movement. Taking care of oneself starts with small, consistent, lasting daily habits.

This holistic approach, inspired by Japanese principles of longevity, guides our vision at ImunoBran.

We connect people to nature through biosciences

Our Mission and Vision

Our vision is to help people live healthily and improve their overall well-being by drawing inspiration from the laws of nature. We call this vision “Quality of Life”.

Guided by this vision, we offer premium-quality products, the result of research and development of unique natural ingredients, respecting biological balance.

Human Beings Are Part of Nature

We believe it is essential to trust nature, with which we must coexist in harmony. This philosophy, close to traditional Japanese medicine, values the body's overall balance rather than isolated solutions.

This principle, now recognised worldwide, is at the root of our activities and our mission: to support everyone toward a healthier lifestyle, more in tune with nature.

Our Story

1992

The ImunoBran® product was developed in Japan by Mr. Hiroaki Maeda.

1998

Professor Mamdooh Ghoneum began his research work on arabinoxylan.

2016

First contact and launch of ImunoBran® distribution in Luxembourg.

2022

Our product range expands to include more natural products from Japan, and we extend our presence to France.

"Life lies in
health, not in
mere existence."

Ariphron de Sicyone

Taking Care of Your Health Every Day

Adopting good lifestyle habits is one of the best investments you can make in yourself. A balanced diet, regular physical activity, quality sleep, and calm stress management all contribute to lasting well-being.

This preventive, holistic approach is at the heart of the Japanese philosophy we share with you through our products and content.

ImunoBran® 1000

Natural support for the immune system
MGN-3 made of Arabinoxylan
(105 sachets)

What Is ImunoBran®?

ImunoBran® is a food supplement based on rice bran arabinoxylan, designed to naturally support the immune system as part of a healthy lifestyle.

Our approach favours the body's natural balance rather than sudden or artificial effects, respecting each person's own rhythm.

Sachets or Tablets?

-

4 ctablets ImunoBran® 250
contain 1 g of rice bran arabinoxylan

ImunoBran® 1000
MGN-3 arabinoxylan compound

1 sachet ImunoBran® 1000
contains 1 g of rice bran arabinoxylan

Why Choose ImunoBran®?

Natural support

ImunoBran® supports the proper functioning of the immune system as part of a balanced lifestyle, without seeking an artificial or abrupt effect.

A well-tolerated formula

ImunoBran® is suitable for regular use. As with any food supplement, it is recommended to inform your doctor that you are taking it, particularly if you are undergoing treatment.

Easy to fit into daily life

Taken orally, ImunoBran® fits easily into a daily routine, after meals.

How and When to Take ImunoBran®?

ImunoBran® is best taken after meals, for example thirty minutes after breakfast, lunch or dinner, according to the rhythm that suits you.

If you forget a dose, don't worry: simply take it whenever you remember, without doubling the next dose.

For daily use as part of maintaining good health, it is generally recommended to take at least 500 mg of arabinoxylan per day, equivalent to 2 ImunoBran® 250 tablets or half an ImunoBran® 1000 sachet.

As a general guide, the typical dosage ranges between 30 and 45 mg per kg of body weight per day; people of larger build may therefore need a somewhat higher amount.

For a dosage tailored to your personal situation, particularly if you wish for enhanced immune support, always seek advice from your doctor or pharmacist: only they can assess your individual needs.

RECOMMENDATION: if you are following a medical treatment, inform your doctor before starting a course.

A Routine That Adapts to Your Lifestyle

Like many good habits, a course of ImunoBran® is something you build over time. Many of our customers simply incorporate it into their daily routine, alongside meals, as a preventive habit just like a balanced diet or regular physical activity. The duration and dosage tailored to your personal situation should always be defined together with your doctor or pharmacist, who knows your health condition and can best guide you.

Our team remains at your disposal to answer your practical questions about using the product day to day.
